

Capability Statement

Overview:

Ground Tamers is a Central Queensland-based company specialising in hydromulching and erosion control services for commercial projects.

With a focus on delivering exceptional results, we cater to companies delivering infrastructure projects of national significance and multiple levels of government, including Livingstone Shire Council and the Queensland Government's Department of Transport and Main Roads.

Points of Differentiation:

- *Local Expertise:* Ground Tamers distinguishes itself by being deeply rooted in Central Queensland. Our local presence and knowledge allow us to efficiently tackle projects of varying scale, from small-scale residential to large-scale commercial developments.

- *Refined Techniques:* Our techniques have been developed over time to ensure optimal product utilisation while delivering high-quality outcomes at competitive rates. We prioritise efficiency without compromising on quality, always striving to exceed our clients' expectations.

We can deploy soil binder polymer up to around 20,000 square meters per day, depending on terrain and conditions, and hydromulch at a rate of up to 3,000 square meters per day. Unlike bulk blasting from cannons, we employ smaller and more agile truck and trailer setups, enabling us to apply products in a precise manner to minimise overspray.

Environmental Responsibility:

Ground Tamers is committed to following environmentally friendly practices and sustainability. Our operations prioritise:

Erosion Control:

Addressing erosion necessitates a unique strategy for each project. We are conscious of the environmental implications that are inherent in construction and the need for protection of the environment, especially waterways.

We work in consultation with industry experts to ensure our clients achieve successful outcomes in erosion management. Ground Tamers offers a variety of solutions and in-depth expertise in product application to ensure efficient and effective erosion control is achieved.

We customise our hydromulching and hydroseeding services to fit your objectives, strategy and budget. Whether you're managing erosion on a large commercial site or rehabilitating a landfill, we adjust our approach to suit the type of land and its specific conditions.

Dust Control:

Controlling dust and stabilising soil are key challenges in construction, land development, and earthmoving.

We specialise in delivering effective, long-lasting solutions for a wide range of sites, from slopes and low-traffic areas to stockpiles. Using innovative polymers, our solutions are designed to handle everything from construction sites to steep embankments.

Offering ecologically responsible dust management solutions for civil construction, mining activities, and both residential and commercial construction endeavours, our array of purpose-designed products stands unmatched in terms of suitability, resilience, eco-friendliness, and operational efficiency.

Revegetation:

The initial stages for successful revegetation involve stabilizing the ground and creating a fertile foundation for growth. This is the guiding principle behind our revegetation solutions.

Our solutions include hydroseeding, hydromulch and polymer application. For depleted soils, we offer soil restoratives to support early germination and facilitate the sustainable revegetation of disturbed land across diverse environments.

100% Australian-made from sustainably sourced, reclaimed and repurposed materials, our bonded wood-fibre product supports sustainability initiatives and objectives.

Water Treatment:

Our hydromulching services play a crucial role in erosion control, preventing soil degradation and promoting sustainable land management practices.

Efficient Product Application:

By utilising advanced application methods, we minimise product waste and environmental impact while ensuring value for money for our clients.

Product Selection:

We exclusively use products manufactured in Australia, ensuring quality and supporting local industry. These products are selected for their environmental friendliness and compliance with regulatory standards. They are 100% Australian-made, bio-contaminant-free, and sustainably sourced.

Track Record:

Ground Tamers boasts a proven track record of success, having delivered exceptional service and results for clients on a variety of projects, including:

- Rockhampton Ring Road North project with **BMD-Bielby JV**
- Rockhampton Ring Road South with **Acciona-Fulton Hogan JV**.
- Various projects in Yeppoon with **Livingstone Shire Council**.
- Rockhampton - Yeppoon Road Widening and Upgrade with **CMC Group**.
- Residential subdivision in Yeppoon with **Brewer Civil Group**.

- Fitzroy to Gladstone Pipeline with **BMD-McConnell Dowell JV**.
- Mount Morgan Mine redevelopment with **Heritage Minerals**.
- Residential subdivision in Rockhampton with **Riverside Waters**.
- Truck stop and rest area at Midgee for the **Department of Transport and Main Roads with RMS Civil**.
- Residential subdivision in Yeppoon with **Shadforths Civil**.
- Commercial subdivision in Yeppoon with **Capricorn Sand and Soil**.
- Residential Subdivision in Rockhampton with **JRT Civil**.
- Rockhampton Waste Management Facility for **Bloomscapes CQ**.
- Yeppoon Aquatic Centre for **Woollam Constructions**.
- Rockhampton – Mt Morgan Pipeline project with **Haslin Constructions**.
- Intersection upgrade with **Malchi Quarry**.
- Broadsound Solar Farm for **Horizon United Projects**
